AutoCAD can be used to create 2D and 3D drawings, which can be rendered and saved in various file formats. It can be used for architectural, mechanical, construction, landscaping, infrastructure, and product design, as well as drafting, drafting/drafting line, and technical drawings. AutoCAD's programmable drawing tools, available since 2002, allow it to be used as a digital authoring and simulation tool. Most of the technical and drafting limitations of earlier CAD programs are no longer present in AutoCAD, including its extensive array of technical drawing tools, straight line, arc, circular arc, ellipse, hyperbolic curve, and spline functions, and ability to create surfaces. AutoCAD can also operate as a CADD engine, meaning it can be used as a collaborative software application that allows several designers to work at the same time on a drawing, such as in a collaborative on-line environment, or on a network. 3D CAD software can be categorized as being either architectural-focused, mechanical-focused, civil engineering-focused, structural engineering-focused, or product design software. Installation and usage of AutoCAD can be a complex process. The installation and operation of other third-party software can be a time-consuming process. Contents show] File formats Edit It is important to note that all file formats are created with AutoCAD; the user does not create the file formats. AutoCAD creates several different file types for each drawing. For example, a drawing created in AutoCAD can be saved as an AutoCAD drawing file (.dwg) or as an external file (.dxf). AutoCAD can also save drawings as a PDF file (.pdf). The PDF files can be linked to other documents, such as Word or Excel files, for viewing. Saving in PDF format is useful for outputting drawings for distribution in some countries. It can also help to work with 3D models that are used in some other software. Preparation of file formats Edit The file format settings can be modified, which can change the internal format of the file. This can be useful when working with a specific file format, such as the PNG or BMP file formats. File formats can be modified using the File Format Editor (FFE) dialog. This dialog can be accessed by selecting "File" from the "Tools" menu of the ribbon,
