Editing video and audio in Photoshop allows you to edit virtually any type of media. This includes audio files such as WAV, MP3, or AAC files and video files such as AVI, MP4, MOV, and more. Using the media in Photoshop, you can retouch or manipulate the files. These edited files can then be converted into all kinds of other formats — for example, you can convert video files into images or TIFF files that you can use in other programs. You can even change audio files to MP3, AAC, WAV, or MP4 (with an audio track) so that they can be played as audio files rather than traditional videos. (See the "Video and audio editing" section, later in this chapter, for more information.) You can use many programs to edit audio and video files, but Photoshop is the best because of its advanced editing features. You can edit video and audio the same way that you edit images. In fact, because video and audio files are just images with additional information, you can edit them the same way that you edit images.

## What's New In Photoshop CS5?

, mutations in the \*SPINK\* genes were found to be significantly associated with tumour stages. These findings suggest that \*SPINK\* gene mutations may be correlated with the tumour stage. Protein and mRNA expression levels of \*SPINK\* genes {#Sec16}

----- All of the \*SPINK\* proteins were detected in the LSCC by immunohistochemistry. The expression of SPINK3 protein in OSCC was markedly higher than in normal tissues. Both SPINK1 and SPINK3 were strongly expressed in OSCC, and SPINK1 and SPINK3 were highly expressed in the tumour samples of T3 and T4 stages, indicating that SPINK1 and SPINK3 may participate in the pathogenesis of OSCC. The mRNA levels of all the four \*SPINK\* genes, including \*SPINK3\*, were upregulated in OSCC. Moreover, the mRNA expression of \*SPINK\* genes in T1 and T2 stages was higher than in T3 and T4 stages, suggesting the loss of ability to express SPINK1 and SPINK3 in the late stage of tumours. Together, our data suggested that the \*SPINK1\* and \*SPINK3\* genes were highly expressed during the early stage of tumour formation and may promote the malignant transformation of LSCC, while the downregulation of \*SPINK\* genes may occur during the late stages of tumour formation. The SPINK family is mainly found in the oropharynx and exocrine glands \[[@CR15]\]. However, the expression of the \*SPINK\* genes in OSCC has not been reported to date. This is the first study to show the highly expression of the \*SPINK1\* and \*SPINK3\* genes in OSCC. Furthermore, the results revealed that the expression of \*SPINK1\* and \*SPINK3\* mRNA in OSCC was upregulated in the early stage of tumour formation, indicating that they may be involved in the tumour formation, while the expression of \*SPINK1\* and \*SPINK3\* mRNA may be lost during the late stage of tumour formation. The main function of SPINK1 is to inhibit the activity of trypsin \[[@CR16]\]. In addition, the amino acid sequence and 3-D structure of SPINK1 are homologous to those of human plasma kallikrein. SPINK1 is
